PROFESSIONAL SUMMARY

Full Stack Engineer with 6+ years of experience delivering scalable, high-performance enterprise applications across complex, data-intensive environments. Strong Python backend engineer with hands-on experience in Django paired with deep React, NextJS and TypeScript expertise on the frontend. Proven track record with AWS (Lambda, S3, SQS, DynamoDB, CloudWatch). Daily user of AI coding tools including Cursor and Claude Code. Track record of optimizing mission-critical systems under strict reliability requirements including 99.9% uptime targets, sub-120ms data retrieval, and high-throughput event-driven architectures. Comfortable working in agile, cross-functional engineering teams that prioritise clean architecture, observability, and data-driven delivery.

WORK EXPERIENCE

EF Education First – Budapest, Hungary

Software Engineer

Nov 2024 – Present

- Engineered and maintained scalable React + Next.js components, RESTful APIs, Cypress tests, and integrated Storyblok CMS to deliver lead-generation marketing sites for diverse projects across all EF departments.
- Designed and implemented event-driven microservices using the Architect (Node.js) framework on AWS Lambda, applying CQRS-inspired patterns to decouple API concerns delivering scalable, independently deployable backend services with documented interface contracts.
- Collaborated in agile sprints across product, design, and infrastructure teams to define and ship platform-level features translating business requirements into technical specifications and maintaining alignment through Confluence documentation.
- Migrated from ISR to SSG and deployed via AWS S3 with an automated GitHub Actions CI/CD pipeline, reducing TTFB by 40%, cutting page load times by 45%, and enabling 3 times more deployments per day while maintaining 99.9% uptime.
- Scaled a student photo-voting campaign's infrastructure after unexpected traffic surges by implementing AWS WAF, CloudFront with secret origin headers, and a custom middleware layer validating Cloudflare Turnstile CAPTCHA tokens, eliminating direct API Gateway exposure and protecting against bot abuse.

Sarc MediQ – Remote

Full Stack Developer

Jan 2023 – Oct 2024

- Optimized streaming viewer for efficient loading of medical studies by implementing advanced caching and pre-loading strategies, resulting in a 30% performance improvement in medical image processing.
- Integrated and customized OHIF Viewer within a React/Django-based DICOM platform using Cornerstone3D and Web Workers, enhancing diagnostic 3D volume visualization and boosting radiologist workflow efficiency by 30%.
- Optimized patient data management within a Django-based modular architecture by applying ORM query optimization techniques with PostgreSQL indexing and multi-attribute search algorithms leveraging Q objects, achieving a data retrieval latency of 120 milliseconds and enhancing dashboard responsiveness by 2.5x.
- Automated report generation for clinicians by building a rule-driven templating engine in React and TypeScript utilizing JSON-schema validation and dynamic mapping, accelerating reporting speed by 50% and standardizing findings across departments.
- Led adoption of Jest and React Testing Library testing standards across the frontend codebase, mentoring team members on test-driven development practices and reducing regression defects in a high-stakes diagnostic platform.

xiQ Inc. – Lahore, Pakistan

Senior Frontend Developer

Jul 2022 – Dec 2022

- Optimized list rendering and components in React, TypeScript, using virtualization and memorization, cutting initial load time by 90% and reducing re-render time to under 50 ms.
- Built a workflow automation feature, a nurturing tool for hyper-personalized marketing campaigns based on user actions and behavior, using React, TypeScript, React DnD, and a Depth-First Search algorithm, enhancing user workflow efficiency by 30%.

Carte Blanche Innovation Integrated – Lahore, Pakistan

Front-end Developer

Feb 2019 – Aug 2022

- Led front-end development using React, Redux, and Material UI to build a scalable, responsive mobile-first UI for an ATS platform named HireCinch.
- Helped establish a comprehensive design system using React, TypeScript, and Material UI, creating a shared component library that standardizes UI patterns and accelerates feature development.

- Engineered application-level integrations with RESTful APIs and Web Services using Redux and Redux-Saga to manage asynchronous data flows via AJAX and JSON, ensuring consistent state management and robust client-server communication.
 - Implemented automated testing (Jest, React Testing Library) and QA processes that reduced post-release bugs by 40% and improved team collaboration and release reliability
 - Conducted user research and designed wireframes/prototypes using the Venture Design framework to validate product-market fit prior to launch.
 - Developed RESTful APIs using Java Spring Boot following MVC architecture and best practices.
-

PROJECTS

MarketMind AI – Personal Side Project

[project link](#)

- It is a multi-agent investment research assistant that helps users evaluate securities, monitor market sentiment, analyze earnings reports, and assess financial risk.
- Developed in LangChain/LangGraph with the integration of LangSmith

VideoRooms – Client Project

[project link](#)

- Developed a real-time video communication platform featuring multi-user video calls, chat, and room management, using ReactJS, React Query, and Redux Toolkit.
- Integrated Agora.io SDK for low-latency audio/video streaming, supporting up to 12 concurrent users with latency under 500ms.

Raabta – Client Project

- A voice/video calling and chat application for KaiOS smart feature phones, providing WhatsApp-like functionality on low-power devices. Used Vanilla JavaScript, DOM and browser APIs, Janus, WebRTC, and WebSocket's to enable reliable real-time communication on constrained hardware.
-

EDUCATION

FAST NUCES – Pakistan

M.S. in Software Project Management – 2021 - 2023

- GPA: 3.7 | Software Project Management, Software Quality Assurance, Software Process Management & Metrics, Requirements Engineering

FAST NUCES – Pakistan

B.S. in Computer Science – 2014 – 2019

- Data Science, Database Systems, Object-Oriented Analysis and Design, OOP
-

SKILLS

- **Languages:** JavaScript, TypeScript, Python, Django, HTML5, CSS3, SQL, Java (basic)
- **Frameworks & Libraries:** React.js, Next.js, Node.js, Django, Redux, Redux-Saga, Tailwind CSS, Material UI
- **APIs & Architecture:** RESTful APIs, GraphQL (basic), microservices, event-driven architecture, MVC.
- **Databases:** PostgreSQL, SQL (indexing, ORM query optimization), NoSQL
- **Testing:** Jest, React Testing Library, Cypress
- **CMS & Collaboration:** Storyblok CMS, Jira, Confluence, Figma
- **DevOps & Tools:** GitHub Actions, AWS (S3, CloudWatch, SQS, WAF, CloudFront), Docker, Vercel, Cloudflare, Git, Terraform
